

COP 3223 Section 1

Practice Problems #4 – Fall 2011

Instructor: Dr. Joseph J. LaViola Jr.

1. Download the `broker.c` program from WebCourses. Compile and run the program. Modify the program so that the user can enter more than one trade and the program will calculate the commission for each. The program should terminate when the user enters 0 as a trade value.
2. Download the `square3.c` program from WebCourses. Compile and run the program. Modify the program so that the for loop initializes `i`, tests `i`, and increments `i`. Don't use any multiplications.
